Security Education and Awareness Training

Essentials

Security Awareness and training is an extremely important aspect of an information security program. Currently, most hacking attacks focus on the weakest link to security, the user. Through means of social engineering, individuals who are attempting to steal information or gain access to systems use several different techniques and tricks such as email phishing. The strongest defense for the techniques and tricks is an educated user base that can identify such attacks and report them through the proper channels.

Benefits

SecureState provides a packaged solution in the form of course material, monthly campaigns, security education material such as newsletters, posters and expert security speakers. This is an off-the-shelf solution designed to save time, money and resource costs typically associated with the internal development of such material. In addition, SecureState's expertise and focus on information security will provide insight and wisdom from trained security professionals.

SecureState customizes the training to each organization, through a variety of materials and methods, based on the fact that in order to effect real change, users have to hear a message three different times. Through the use of our newsletters, WebEx Presentations, Annual Awareness day and reinforcement quizzes, we will ensure that users will have heard the lesson on several occasions, and through several mediums to appease users of all responsibility levels and personalities. While the same lesson may be repeated several times throughout the year, SecureState uses new use cases and examples to keep the material fresh.

Deliverables

- PowerPoint slides and test questions that can be converted into the proper formatting for implementation
- Awareness Newsletter
- Timely campaigns focused on current events
- Design of Posters, Handouts, Flyers or other necessary material for reinforcement
- Web Content

Expertise

SecureState is a leading organization in information security consulting for both the Federal Government and Commercial sector. As a management consulting firm, SecureState only provides services that focus on information security. This has allowed us to excel in the area and provide the knowledge and expertise, as well as best practices from both Commercial and Federal sectors. SecureState's consulting team works with more than 200 organizations annually, which allows us to identify and leverage best practices from across a variety of industries including effective implementation of security awareness programs, common issues, and use cases. Our back office support team consists of experts in all areas of information security from regulatory and privacy, to security testing and incident response. Each of these individuals are certified to DoD 8570.2 with certifications such as CISSP, CISA, GIAC, Security+, Certified Information Privacy Professional (CIPP), which ensure that NASA will have certified experts developing their program.

By outsourcing this requirement, organizations save time, money and resources that would typically be assigned to such tasks. Furthermore, SecureState's courses are developed and improved over time which provides organizations with a proven course that can be effective in several different environments. The use of an outsourced organization also allows organizations uniformity as knowledge is maintained by the third party organization and not affected by resource movement.
